

# 仕上乾燥機

ROTARY FINISHING DRYER

TR-10SP With dust collector (Optional)

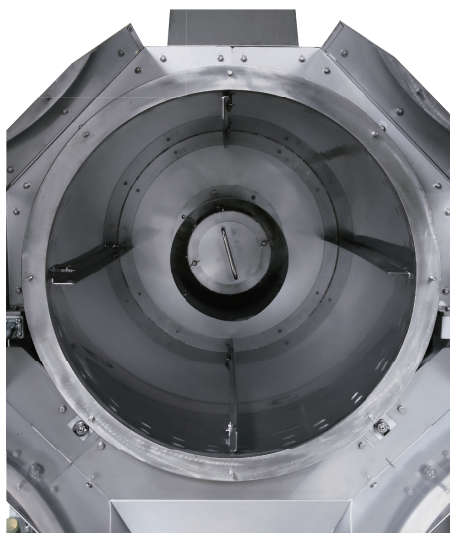

Small lot of various foods finish drying is done efficiently.

Process finish drying of various foods in small lots using long time know-how of tea leaf processing technology.

You can rate the finishing since we respond to special test drying requests.

### Discharge mechanism

The drum rotates in reverse when discharging and will be discharged without remaining since drum lowers to maximum 40 degrees.

### Rotating drum

Rotating drum made even drying possible. The suction pipe in the center of drum is double structured to prevent sucking the material. (Suction pipe can be removed & cleaned easily.)

### Feeding device (Optional)

Prepared a feeding device to feed the material smooth in short time.

### Dust collector (Optional)

## Features

- Processes seafood, vegetables, beans, mushrooms, fruits etc. with corresponded specification.
- Dries & roasts by heating with gas burner from below the rotating drum while mixing with steel plates inside.
- Can be dried, roasted without stuffiness since the inside drum humidity will be exhausted with suction blower according to inverter controlling.
- Powder which is in product's exhaust air can be removed with the dust collector.

### Specifications
