

# Pan parching machine (Continuous type)

Uses as after process of pan firing machine (Continuous),  
Pulls out the pan fired tea original aroma by parching the pan fired leaves with heated fixed drum.

LPG furnace part with metal NIT burner

IR-250

## Features

- According to original scattering hand, spreads leaves & prevents leaf burning, improves color & aroma, stable parching & even leaf flow is possible.
- Operation is easy since adjusting of tea leaf parching state & drying degree adjustment is only shaft rotation & drum temperature controlling.
- Using LPG metal NIT burner for heating rotating drum, even temperature distribution & used temperature adjustable proportional control, processes most suitable temperature controlling in parching machine before & after processes.
- In tea leaf drying latter process, removes chopped leaves & tea dust from drum which deteriorates product quality & collects with dust collecting device.
- Widely opening cleaning door is on fixed drum front, cleaning & maintenance is possible easily & safely.

## Specifications

※Note: Cannot be used near flammable things.

Type	Width mm	Length mm	Height (Frame) mm	Height (Dust collector) mm	Weight kg	Power		LPG consumption (Maximum) kg/h	One batch input amount (Fresh tea leaves) kg/h
						Drum rotation kW	Exhaust fan kW		
IR-150	3,360	1,470	1,860	2,720	1,200	1.5	0.75	4.2	150 ※1
IR-250	5,100	1,470	1,860	2,720	1,600	2.2	0.75	8.4	250 ※1

※1 Changes according to leaf state like tea season, withered leaf etc.

※Part of the specifications might be changed for improvement.
