

CUTTER MILL CM-350

TERADA

Powerfully shears the ingredient with more fiber that cuts with high precision to a uniformed granularity.

Screen can easily be attached/detached.

Stainless screen (φ5 hole)

Processing example

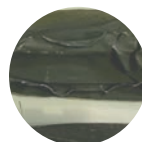

Before

After

Tencha (Stalk)

Kelp

Dry fish

Orange peel

Features

- Sharp rotating blade & fixed blade designed with narrow gaps that catches the ingredient properly & cuts with even granularity.
- Cutting size can be adjusted by the screen hole size, screen can be exchanged easily. (Standard size φ3~10)
- Since the rotation is slow, dust generation is less & less noisy.
- Dust collector (Optional) can be connected with dust collection adapter (For manual input) & clean, hygienic process is possible.
- Since magnet is attached in case of any metallic mixing of ingredient can be removed.
